

Hallo Scientists!

Well done! You have explored the geography of Europe and you have found out which countries belong to the EU.

Your asteroid shield is good, but it is also expensive. Building it will cost 5.4 billion euros.

Hence, for deploying the shield, the EU will have to provide a lot of money. That's not so simple. The EU needs to issue a law for it.

Find out how in the EU laws are made!

INFORMATION BY THE AGENCY FOR  
CRYPTO SECURITY AND DATA PROTECTION:

THE NEXT CODE HAS BEEN ENCRYPTED.  
FOR DECRYPTING, ADD 1 1 1.

HAPPY DECODING!

Hallo Scientists!

You discovered that legislative proposals (bills) in the EU can be officially issued only by the European Commission.

The Commission consists of Commissioners (kind of high-ranking civil servants). There is quite a number of them: one from each EU member country.

Find out, how many members countries the EU has!

Add 100 to this, and you get the next code.

Alarm from Interpol!

Three false commissioners have sneaked in. Find the three fake ones.

When you have them, it will tell you which real commissioner you need to contact urgently.

Tell him that you have a solution to the asteroid problem and that you need a lot of money from the EU quickly.

Thank you for this important advice!

The Commission will immediately prepare an initiative for European legislation. But the Commission can do only this first step.

Next, we need the Parliament!

Dear scientists, please help to ensure that the Parliament **assembles** as soon as possible.

It must assemble in the town that is its official **seat**!

Make sure that all voices in Parliament are given their due **weight**.

Congratulations!

You have successfully made sure that the people's representatives are now fully assembled in parliament and can vote.

But you also have to convince the parliament that your asteroid shield really works. Show with the asteroid launcher that the asteroid umbrella really is suitable to protect Earth!

Message from the Commissioner for Crisis Management (his call to the scientists): :

This is the Commissioner for Crisis Management.

Thank you very much. You did a very good job with the parliament. The majority of the people's representatives are convinced of your asteroid umbrella!

But we are not there yet.

Do you remember how a law is passed in the EU?  
One institution still has to be involved.

Find the institution code!

Then add to it its cross sum!

# Hurra!

The asteroid shield has been deployed!

Thank you, scientists, for taking the trouble to find out how the EU works and to get it to bring about funding and legislation in a joint effort of all 27 member countries.

The world is saved!

It is all thanks to your efforts!

As a reward, enjoy the chocolate euros.
